

30% higher Granulator-performance Review

🔗 RECYCLING 🔗 SIZE REDUCTION

We are really satisfied with the new granulators from Herbold Meckesheim. We do now achieve a 30% higher throughput with the same energy consumption compared to previous grinders – even with a smaller grinding chamber. Furthermore, the granulators are more stable and the feeding of parts is better: Both the quality and the better price-performance ratio of Herbold Meckesheim convinced us.
