Special Granulators

HERBOLD supplies "custom-made" granulators designed for the special requirements for manufacturing in the chemical and plastics industries.

The illustration shows a gas tight machine with outboard rotor bearings designed with air purged sealing.

The housing is equipped with water cooling and is centrally hinged for quick access to the grinding tools.

The granulator has been constructed from welded stainless steel and is resistant to pressure impulses.

This machine, which is just one example of many solutions already in operation, was developed in close cooperation with the customer.

Our product range

- Granulators
- Pulverizing Systems
- Shredders
- Hammer Mills
- HOG Shredders
- Guillotines
- Washing Systems
- Plastcompactors
