

Optimizing the Pneumatic Conveyors of your Granulator or Grinding Unit

Filter boxes for dedusting the conveying air:

- Herbold filter boxes are available for different air quantities and due to the cleaning opening, provide an **optimal access** for cleaning and maintenance.
- Additionally, the filter boxes are equipped with an integrated adjusting cone for different material densities and can also be retrofitted with a dust collector.
- Automatic bag filters for all possible cases where filter boxes are not sufficient.

Wear-resistant pipe elbows:

- Due to the **exchangeable** wear protection, Herbold wear-resistant pipe elbows are **re-usable** and due to the larger radius, **less prone to wear** than traditional pipe elbows.

Cyclones with an air outlet at the top and an outlet for solids at the bottom:

- Herbold cyclones are available for different air quantities and due to their cleaning opening, provide an **optimal access** for cleaning and maintenance.
- A **wear-resistant** version with exchangeable infeed sections of the cyclones is also available.

Please contact us if you are interested in the possibilities we have to find an optimal solution to your application.
