

Herbold Meckesheim Provides Optimal Silo Systems for all Materials with Poor Flowing Properties

Storage, homogenizing, mixing and discharge of the materials are important aspects of a complete recycling plant for plastic waste.

Round silo

Herbold round silos, due to their special design, efficiently prevent the bridging effect and ensure a **trouble-free discharge of badly flowing materials**. Round silos are available up to a volume of 20 m³.

From a volume of 20 m³, we recommend **rectangular silos** up to 60 m³.

Mixing silo

Herbold mixing silos are the optimal solution for **homogenizing high-quality bulk materials**. Mixing silos are available for volumes up to 20 m³.
